

## OVERVIEW

Hey! We've packed an extra surprise inside your bag of Van Minion gummies! Inside, you'll find a card with a QR code printed on the back. This QR code encodes a unique Ethereum wallet (lets call it your gummy wallet) containing an exclusive Christian Rex van Minnen NFT entitled "Changing Tides".

We suggest you import your gummy wallet into MetaMask and transfer the NFT off to your own wallet for safe-keeping as soon as possible. Here's what you need to do:

## IMPORTING YOUR GUMMY WALLET ON MOBILE

To import your gummy wallet into MetaMask Mobile:

Tap the icon on the top right of your screen to open up the QR code scanner.

Point your device's camera at the QR code to scan it.

When prompted, confirm that you would like to import the account.

## IMPORTING YOUR GUMMY WALLET ON DESKTOP

To import your gummy wallet into MetaMask using the desktop browser extension, you need to get the encoded private key.

Scan the QR code with any capable device to reveal the encoded private key; scanning the QR code with your phone's native camera application (not MetaMask Mobile) should do the trick.

You will end up with a long string of letters and numbers that looks something like:  
``bd52a55495bfff7d82b63ced-f8088ccd8007285e14a51186737d-84b22f4d2acbe``

Open the Metamask browser extension and click on the icon on the top right to view your list of accounts.

Beneath your accounts, click the "Import Account" option.

Copy and paste in the private key of your gummy wallet and click "Import" to complete the process.

## TRANSFERRING YOUR NFT

Once you have access to your gummy wallet, we recommend that you transfer the NFT to a more secure wallet. You can transfer the NFT using OpenSea's website, but please note that you'll need to send some funds to your gummy wallet first to cover the gas costs associated with the transfer.
